The system shall be capable of operating either as an air conditioner or a heat pump.
Capacity (Btu/H)	The capacity is the quantity of heat in Btu (British Thermal Units) that an air conditioner or heat pump is able to remove from an enclosed space during a one-hour period.
Heating Section Type	The type of heating section the LCHVAC systems uses. A system can use either all heating section types, or electric resistance (or none).
SEER Rating (Btu/Wh)	SEER is a measure of equipment energy efficiency over the cooling season. It represents the total cooling of a central air-conditioner or heat pump (in Btu) during the normal cooling season as compared to the total electric energy input (in watt-hours) consumed during the same period.
EER Rating (Btu/Wh)	EER is a measure of efficiency in the cooling mode that represents the ratio of total cooling capacity (Btu/h) to electrical energy input (Watts).

Column Header	Definition
IEER Rating	IEER is a measure that expresses cooling part-load EER efficiency for commercial unitary air-conditioning and heat pump equipment on the basis of weighted operation at various load capacities.
HSPF Rating (Btu/Wh)	HSPF is a measure of a heat pump's energy efficiency over one heating season. It represents the total heating output of a heat pump (including supplementary electric heat) during the normal heating season (in Btu) as compared to the total electricity consumed (in watt-hours) during the same period.
COP Rating	A measure of efficiency in the heating mode that represents the ratio of total heating capacity to electrical energy input.
Date Available on Market	The date that the model is available for purchase.
Date Qualified	The date on which the product was confirmed to meet the ENERGY STAR specification.

Key Efficiency Criteria

Qualified models meet all ENERGY STAR requirements as listed in the Version 2.2 ENERGY STAR Program Requirements for Light Commercial HVAC that are effective as of January 1, 2011.
