STANDARD FEATURES & BENEFITS

- **Armor Max Plus™ Hurricane Glass System**—with three panes of glass and a protective laminated interlayer—provides exceptional protection against airborne debris and other dangers from violent weather. The glass is glazed deeply into the frame to provide optimum structural integrity.
- **Rigid tubular master frame**—with all corners fused together at high temperatures for extraordinary strength—has 13 separate chambers to improve insulating properties, as well as strength and rigidity. Insulfil™ foam inside the frame chambers enhances thermal performance.
- **NEW heavy-duty constant force balance system**—with stainless steel reinforced attachment points—gives you fingertip operation on even larger sizes.
- **Two heavy-duty cam sweep locks** hold sashes in place during violent weather to keep your home safer and more secure. Looking into your home, the locks cannot be seen, which gives your windows a neater, more attractive appearance.
- **Specially compounded vinyl**—clear through—complements practically any architectural style and is pleasing to the eye.
- **Zamac 3 latches on double-hung models** help keep sashes secure during violent weather, yet let you tilt in the sash easily for cleaning.
- **Gorell’s high-performance Low-E coating and argon gas between the panes** ensure that Armor Max Plus impact windows lower your home energy costs and make your home more comfortable.
- **Luxury automotive-type window glazing** creates a super-tight seal to keep exterior air and moisture out.
- **Insulating foam wrap around the frame** significantly reduces the possibility of drafts.
- **PPG’s patented Intercept® spacer system** reduces energy loss through the glass.
- **Special double/double weather stripping** helps to eliminate drafts and improves the window’s insulating properties.
- **Distinctive millwork lines on the interior master frame** provide the look of hand-tooled molding.

OPTIONS FOR CUSTOMIZATION

- **Almond color vinyl frames and sashes** (clear-through) provide a softer, muted look that many homeowners prefer.
- **Oriel-style design—on double-hung models**—provides an asymmetrical sash size configuration that gives you a larger viewing area in one of the sashes.
- **Internal grids** give your windows the look of divided lites, yet you never need to clean them because the grids are between the glass.
- **SolarShine™** keeps your windows cleaner longer and allows water to “sheet” off the glass instead of beading and water spotting.
- **Obscure laminated glass pattern** offers privacy while allowing in light for a beautiful, distinctive appearance.
