

Room air conditioners have come a long way...

ENERGY STAR® qualified models save energy and money.

Room air conditioners are great for apartments, a home office, bedrooms or any other room where localized cooling is desired.

When purchasing a room air conditioner, always look for ENERGY STAR qualified models. They are at least 10% more efficient than units that have not earned the ENERGY STAR label, saving you money on your electric bill every year. Replacing a 10-year old unit with a new ENERGY STAR model can save you an average of \$400 over the life of the air conditioner.

Discounts now available

From April 1, 2011 through August 31, 2011, LIPA appliance retail partners are offering special discounts on room air conditioners between 5,000 – 8,000 BTUs.

Log on or call today for information and a list of participating appliance retailers.
