

**TODAY'S COMPACT FLUORESCENT BULBS...**

# **More shapes. More options. More savings.**

Compact fluorescent bulbs (CFLs) use less energy and that can save you money. Better yet, today's CFLs now come in a variety of shapes such as globes, A-shapes, reflectors, and decoratives, most with dimmable and three-way models available. That means there's an energy and money-saving CFL bulb for every light fixture in your home.

### **Save money with LIPA rebates.**

So go ahead. Light up your home and enjoy the savings. Replacing a regular 60W bulb with a 14W CFL can save you \$16.54 per year (using the light five hours per day). Plus LIPA rebates will save you even more.

For information on rebates for CFLs and other ENERGY STAR qualified products, visit [www.lipower.org/efficiency](http://www.lipower.org/efficiency).

*Working with you for a more energy-efficient Long Island.*
